CONCRETE STREET NAME STOPSIGN

We all know that metal road signs are stolen on a daily basis.

On a 5 km route in Randfontein, there are 32 stop signs missing. This is obviously a grave danger to road users.

It is cast in 35 MPA concrete and the letters are cast into the concrete itself.

We paint the surface with road marking paint and cover it with glass beads for reflection in the night.

At no extra cost, the road crossings two names are also cast in the side of the stop street sign.
